 before the bigplunge}

Since January, investors have had key information documents aimed at making it easier for them to compare products. How are they bearing up, asks Eithne Dunne

If you have recently inquired about
investing spare cash instead of leaving it on deposit, you might have some key
information documents (Kids) floating about your house.
Since January, all providers of pack aged retail investment and insurance
products (Prips have been obbiged under EU law to give potential investors
these documents before they committo a particular product. A Priip is any product
offered by banks and other financial nstitutions as an alternative to deposit
accounts. This means anything that is exposed to stocks or bonds, provides
return and comes with risk - principally, nvestment products and insurance-
based investment products. Pensions are not covered.
The legislation seeks to tackle the fact hat the information provided by banks ordinary investors, and therefore difficult to use for comparisons across
products. The aim is to make it straight-
frward for ain products and clearly see how they compare on cost, risk and potential reward. Each Kid must be no longer than three
4 pages and include clear information A4 pages and include Clear information
under prescribed headings. It must show
the risk reward profile of the product the risk/reward profile of the productthat is a risk rating and various potential
performance scenarios - and a breakdown of costs.
This is the first time that companies
selling these products have had to lay out selling these products have had to lay out
all costs involved. In the past, the only charge they were obliged to specify was
he annual management charge - a situation that left some investors unprepared for subsequent costs.
While Kids have be pinciple, there is a strong sense they have missed the mark when it comes to making it easier for the ordinary investo "The whole idea was to simplify invest ing, and that's a noble objective," says
Eamon Porter, principal of Aspire Wealth Eamon Porter, principal of Aspire Wealth
Management. "However, it reminds me the committee'. It has been designed by bureaucrats and is causing problem According to Steven Barrett, managing
director of Bluewater Financial Planning he intention was good but the execution has been poor.
"Kids cause require a lot of explaining from advisers. took me a while to figure out what they meant, and there was a lot of going back he says.
While all providers have made Kids available, they are not all on the same
page when it comes to certain assump.
tions wand the pproach make it difficult for investors to evaluate products.

was it really such a bad deal? comprise New York City. But
was it really such abad deal?
When we consider money When we consider money
we tend to think of it in we tend to think of it in
nominal terms - the euros
and cents in our and cents in our accounts.
But wht if But what if the Native
Americans had inves But what if the Native
Americans shad invested the
money and earned a

In 1926, \$24bn. And in 2026, it would be $\$ 24$ A trillion. We
haven't reached 2026 yet haven't reached 2026 yet, so
if we take one double away if we take one double away
and its 2016 equivalent would
and be $\$ 12$ trillion.
The total net worth of the
entire United estimated at $\$ 123$ trillion, according to Wikipedia. I don't know what Manhattan 20 sq km of America accounts for a 10th of the country's wealth. So maybe
the native Americans didn't the native Americans didn't
get such a bad deal after all. The long-term return on the US stock market has been
about $10 \%$ per annum going about $10 \%$ per annum going
back to 1900 , according to several sources. Maybe future returns will be lower, who
knows. The rate of return we knows. The rate of return we
can quibble about, but the

It he said he wanted to be a
millionaire by the age of 30 .
And that he did achieve. And that he did achieve.
Buffett today is worth an estimated \$81bn. In a thought experiment, Morgan Housel
wonders what if Buffett had wonders what if Buffett had when he was age 22 instead of age 11? If, at age 30, Buffett had been worth \$24,000
instead of the $\$ 1$ he he had actually accumulated, and
went on to earn the same returns, he would be worth
$\$ 1.9 b n$ today; $98 \%$ lower than
 The punchline is that $97.6 \%$ of Buffett's worth can
be directly tied to the base he be directly tied to the base he
built in his teens. As Housel
says, "Without the capital says, "Without the capital
base he built before he could grow a beard, you'd probably
never have heard of him."

As the father of 11-year-old twins, I've struggled to create compounding in my own compounding in my own
children. Though I have to admit that I believe a lot of
this to be innate anyway - w this to be innate anyway - we
can help at the margins in terms of nurturing but most of it comes from within. A nice idea proposed by
one of my work colleagues is one of my work colleagues is
to promote the idea of saving by having three jars for money; one is a savings jar,
one a spending jar and a thir one a spending jar and a thin
for charity. They agree a split for charity. They agree a split
between each and then apportion money earned (or
given) between them. I've let given) between them. I've let
early enthusiasm for the idea wane a little, but initially found it to work quite well. Whatever route one takes,
